

SOE GREATER VISION

The School of Education will leverage its strong regional professional education programs and national research and discovery activities to become a global leader in the discovery and application of knowledge to address the educational challenges of the 21st century. Guide by our core values and building on our past century of leadership in public education that is our strong foundation, we will

- Be among the most respected schools of education in the world, recognized for the outcomes and impact of our work.
- Be an international leader in cross-discipline initiatives such as Science, Technology, Engineering, and Mathematics (STEM) education, educational technology, neuro-education, and urban educational reform.
- Address the most challenging problems facing PK-12 education, especially in urban and urbanizing settings. This will be accomplished through leadership and research that provide practical and sustainable solutions that can be adapted as models locally, nationally, and internationally.
- Engage in research, teaching, partnerships, and internal decision-making driven by empirical evidence. This commitment to evidence-based practice includes the use of quantitative, qualitative, and mixed methodologies.
- Deliver innovative master's, advance certificate, doctoral and professional development programs to prepare a new generation of leaders serving students, schools, and communities.
- Be a model for university-community collaboration, addressing critical community issues with solutions that can be broadly disseminated.
- Develop and apply leading edge technologies to enhance teaching, learning, and discovery.
- Demonstrate meaningful and effective collaboration among programs within the School of Education and with other Johns Hopkins schools and centers to address important education and community problems and to enrich the academic life of the university.
- Create an agile organizational model that fosters innovation and creativity, attracts financial support to respond to emerging educational and community needs, and leverages resources to sustain a thriving teaching and learning environment.
